A quadratic relationship is

- 
- 
-

There are 3 forms that we will see in this chapter:

1.

2.

3.

Each form has its own advantages when it comes to graphing, so it is helpful to be able to move between forms.

**Example** Convert to Standard Form  $y = ax^2 + bx + c$

a.  $y = 14x + x^2 - 5$       b.  $y = (x - 4)(2x + 1)$       c.  $y = 3x(x - 6) + 11$

**Example** Convert to Factored Form

d.  $y = x^2 + 6x + 8$       e.  $y = x^2 - 7x + 10$       f.  $y = 2x^2 + x - 6$
