<p>Learning Goal 2.1</p>	<p>Using angles in standard position and relating them to special angle triangles, the unit circle, reference and co-terminal angles and the terminal arm.</p>
---------------------------------	--

Sort the following graphics into 2 groups: Group 1 should have similar attributes, and Group 2 should not.

Example Sketch each angle in standard position. State the quadrant in which the terminal arm lies. Find the value of the reference angle.

a. 36° b. 210° c. 315° 

Example Determine the angle in standard position when an angle of 40° is reflected

a. over the y - axisb. over the x - axisc. over the y - , then the x - axis
