**Learning Goal 1.2**Factor trinomials of the form  $ax^2 + bx + c$ .

How we can relate an area model to binomial products and trinomial expressions?

$$x^2 + 6x + 8$$

$$= (x+2)(x+4)$$

$$x^2 + 7x + 12$$

$$= (x+3)(x+4)$$

But, you cannot use this model forever.

- limited to 2 dimensions
- +ve/-ve is confusing

**Example** Factor the following expression. Expand your answer to check your work.

a.  $x^2 + 10x + 16$

$$\frac{2}{2} \times \frac{8}{8} = 16$$

$$\frac{2}{2} + \frac{8}{8} = 10$$

1	16
2	8
4	4

$$= x^2 + 2x + 8x + 16$$

$$= x(x+2) + 8(x+2)$$

$$= (x+2)(x+8)$$

Unit 1

Factoring Polynomials of the Form

Factors and Products

b.  $x^2 - 2x - 8$

$\underline{+2} \times \underline{-4} = -8$

$\underline{+2} + \underline{-4} = -2$

$= x^2 + 2x - 4x - 8$

$= x(x+2) - 4(x+2)$

$= (x+2)(x-4)$

d.  $m^2 - 8m + 7$

$\underline{-1} \times \underline{-7} = 7$

$\underline{-1} + \underline{-7} = -8$

$= (m-1)(m-7)$

f.  $q^2 - 7q - 18$

$\underline{-9} \times \underline{2} = -18$

$\underline{-9} + \underline{2} = -7$

$= (q-9)(q+2)$

$x^2 + bx + c$

$\begin{matrix} \underline{+1} & \underline{+8} \\ \underline{+2} & \underline{+4} \end{matrix}$

c.  $z^2 - 12z + 35$

$\underline{-5} \times \underline{-7} = 35$

$\underline{-5} + \underline{-7} = -12$

$= (z-5)(z-7)$

$\begin{matrix} \underline{+1} & \underline{+35} \\ \underline{+5} & \underline{+7} \end{matrix}$

e.  $a^2 + 7a - 18$

$\underline{-2} \times \underline{+9} = -18$

$\underline{-2} + \underline{+9} = 7$

$= (a-2)(a+9)$

$\begin{matrix} \underline{+1} & \underline{+18} \\ \underline{+2} & \underline{+9} \\ \underline{+3} & \underline{+6} \end{matrix}$

g.  $p^2 + 7p - 18$

$\underline{9} \times \underline{-2} = -18$

$\underline{9} + \underline{-2} = 7$

$= (p+9)(p-2)$

**Example** What are all the possible values of  $a$ ? For each value, factor the expression.

$x^2 + ax + 24$

- 1 24
- 2 12
- 3 8
- 4 6

$\underline{\quad} \times \underline{\quad} = 24$

$\underline{\quad} + \underline{\quad} = a$

Both +ve

$a = 25, 14, 11, 10$

Both -ve

$a = -25, -14, -11, -10$
