A **system of linear inequalities** can consist of two or more inequalities. The solution

Warmup Solve the system of linear inequalities:

$$y \leq \frac{3}{2}x + 3$$

$$y < \frac{1}{2}x - 2$$

Example A region is defined by the inequalities $x \geq 1$, $y \leq 5$, and $y \geq 2x - 2$. Graph this region.

Example Farmer Johnson owns a 40-hectare radish and rutabaga farm. He has \$6000 to spend on planting costs. Planting radishes will cost Farmer Johnson \$200/ha and planting rutabagas will cost him \$100/ha. Produce a graph of a system of linear equations to model this situation.

- Let $x =$
- Let $y =$

List of the inequalities:

- 1.
- 2.
- 3.
- 4.
