Learning Goal 7.3

I can solve problems involving similar polygons and triangles.

Look at all the shapes given to you (there should be four different shapes, four in each group). Inspect them and decide which ones are scale images of each other. For those that are, find the scale factor and record it in the table. For those that are not, put an X in the table.

Shape	Polygon #1	Polygon #2	Polygon #3	Polygon #4
				
				
				
				

Conclusions:
