

Name: _____

Date: _____

Learning Goal 5.2

I can express relations as expressions, in a table of values and on a graph.

A **formula** is

Example Paula rents a lawnmower for \$8 per hour. A formula representing this relationship is $C = 8t$ where C is the rental cost, in dollars, and t is the time, in hours.

- a. Make a table of values for up to 5 hours only using integer values.
- b. Graph the ordered pairs in your table of values.

- c. Is it reasonable to have points between those on the graph? Explain.
- d. Calculate the cost to rent the lawnmower for 12 hours.

An **equation** is

Example Use $y = 2x + 3$ to answer the following questions.

a. Complete the table of values.

x	y
-5	
-3	
-1	
1	
3	
5	

b. Graph the ordered pairs in your table of values.

c. Use the equation to calculate the y – coordinate when $x = 9$.

d. For the point $(-12, y)$ what is the value for y ?

e. What are the coordinates for the point that would lie on the y – axis?
