

Name: _____

Date: _____

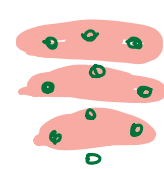

Learning Goal 2.2	I can multiply and divide fractions.
--------------------------	--------------------------------------

Example Use **common denominators** to model the following quotients.

$2 \times \frac{3}{4} \div \frac{1}{8}$ $LCM(4, 8) = 8$
 $2 \times \frac{6}{8} \div \frac{1}{8}$
 $= \frac{12}{8} \div \frac{1}{8}$
 $= 6$
 $= \left(\frac{42}{8} \right)$

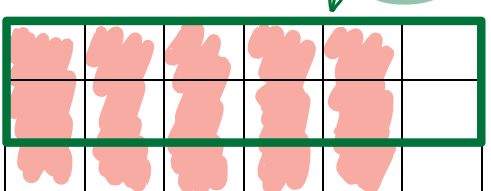

how much pie you have left →
 ← the size of the piece
 How many people can I feed?

$2 \frac{1}{2} \div \frac{3}{4} = \frac{5}{2} \div \frac{3}{4}$
 $LCM(2, 4) = 4$
 $= \frac{10}{4} \div \frac{3}{4}$
 $= 3 \frac{1}{3} = \left(\frac{20}{6} \right)$

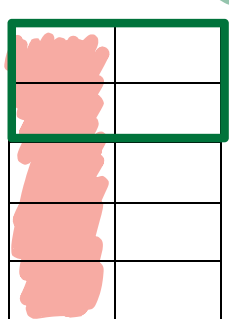

Example Use **arrays** to model the following quotients.

$\frac{5}{6} \div \frac{2}{3} = \frac{15}{12}$ ← # coloured in
 ← new whole.

$= \frac{5}{4}$

$\frac{1}{2} \div \frac{2}{5} = \frac{5}{4}$

$\frac{2}{3} \div \frac{6}{1} = \frac{2}{3} \times \frac{1}{6}$

Dividing Fractions and Mixed Numbers Without using a Model

$$\frac{\text{left numerator} \times \text{right denominator}}{\text{right numerator} \times \text{left denominator}}$$
 or Multiply by the reciprocal of the second fraction

Example Evaluate the following quotients. Write your answers in lowest terms.

a. $\frac{1}{9} \div \frac{2}{7} = \frac{1}{9} \times \frac{7}{2}$
 $= \frac{7}{18}$

b. $\frac{4}{5} \div \frac{3}{10} = \frac{4}{5} \times \frac{10}{3}$
 $= \frac{40}{15} \div 5 = \frac{8}{3}$
 $= \frac{4}{1} \times \frac{2}{3} = \frac{8}{3}$

c. $\frac{10}{9} \div \frac{5}{6} = \frac{10}{9} \times \frac{6}{5}$
 $= \frac{2}{3} \times \frac{6}{1} = \frac{4}{3}$

d. $2\frac{2}{5} \div \frac{8}{15}$
 $= \frac{12}{5} \div \frac{8}{15}$
 $= \frac{12}{5} \times \frac{15}{8}$
 $= \frac{12 \cdot 3}{1} \times \frac{3}{8 \cdot 2}$
 $= \frac{9}{2}$

e. $3\frac{1}{6} \div 1\frac{2}{3}$
 $= \frac{19}{6} \div \frac{5}{3}$
 $= \frac{19}{6} \times \frac{3}{5}$
 $= \frac{19}{10}$

f. $2\frac{13}{16} \div 2\frac{7}{24}$
 $= \frac{45}{16} \div \frac{55}{24}$
 $= \frac{45}{16} \times \frac{24}{55} = \frac{1080}{880}$
 $= \frac{45}{28} \times \frac{12}{55}$
 $= \frac{45}{2} \times \frac{3}{55} = \frac{27}{22}$

Example Vince usually takes $5\frac{1}{2}$ hours to drive from Kamloops to Banff. Because of snowfall, the drive took Vince $8\frac{1}{4}$ hours one day. How many times as long as usual was the drive that day?

~~$5\frac{1}{2} \div 8\frac{1}{4}$~~

The trip took one and a half times longer than usual.

$8\frac{1}{4} \div 5\frac{1}{2}$
 $= \frac{33}{4} \div \frac{11}{2}$
 $= \frac{33}{4} \times \frac{2}{11} = \frac{3}{2} = 1\frac{1}{2}$

Example Sabrina has $3\frac{1}{3}$ L of ice cream to share equally amongst herself and her nine friends at her birthday party. How much ice cream will each person get?

$3\frac{1}{3} \div 10$
 $= \frac{10}{3} \div \frac{10}{1}$
 $= \frac{10}{3} \times \frac{1}{10}$
 $= \frac{1}{3}$

~~$10 \div 3\frac{1}{3}$~~

Each person gets $\frac{1}{3}$ of a litre of ice cream.
